

[Hummingbird](#) / [FileMiddleware](#) / `init(fileProvider:urlBasePath:cacheControl:searchForIndexHtml:)`

Initializer

init(fileProvider:urlBasePath:cacheControl:searchForIndexHtml:)

Create FileMiddleware using custom [FileProvider](#).

```
init(  
    fileProvider: Provider,  
    urlBasePath: String? = nil,  
    cacheControl: CacheControl = .init([]),  
    searchForIndexHtml: Bool = false  
)
```

Parameters

fileProvider

File provider

urlBasePath

Prefix to remove from request URL

cacheControl

What cache control headers to include in response

searchForIndexHtml

Should we look for index.html in folders
