

[JobsPostgres](#) / [PostgresJobQueue](#) / `cancel(jobID:)`

Instance Method

cancel(jobID:)

Cancel job

```
func cancel(jobID: JobID) async throws
```

Discussion

This function is used to cancel a job. Job cancellation is not gaurenteed howerever. Cancellable jobs are jobs with a delayed greather than when the cancellation request was made

- `jobID`: an existing job

Throws
