

[HummingbirdCore](#) / [Response](#) / Response.RedirectType

Enumeration

Response.RedirectType

Specifies the type of redirect that the client should receive.

```
enum RedirectType
```

Topics

Enumeration Cases

case found

302 found: This response code means that the URI of requested resource has been changed temporarily. Further changes in the URI might be made in the future. Therefore, this same URI should be used by the client in future requests.

case normal

303 see other: The server sent this response to direct the client to get the requested resource at another URI with a GET request.

case permanent

301 moved permanently: The URL of the requested resource has been changed permanently. The new URL is given in the response.

case temporary

307 Temporary: The server sends this response to direct the client to get the requested resource at another URI with the same method that was used in the prior request. This has the same semantics as the 302 Found HTTP response code, with the

exception that the user agent must not change the HTTP method used: if a POST was used in the first request, a POST must be used in the second request.

Instance Properties

`var status: HTTPResponse.Status`

Associated `HTTPResponse.Status` for this redirect type.
