

[Hummingbird](#) / [TracingMiddleware](#) / `init(recordingHeaders:attributes:)`

Initializer

init(recordingHeaders:attributes:)

Intialize a new TracingMiddleware.

```
init(  
    recordingHeaders headerNamesToRecord: some Collection<HTTPHeader.Name> =  
    attributes: SpanAttributes? = nil  
)
```

Discussion

- Parameters
 - recordingHeaders: A list of HTTP header names to be recorded as span attributes. By default, no headers are being recorded.
 - parameters: A list of static parameters added to every span. These could be the “net.host.name”, “net.host.port” or “http.scheme”
