

[Hummingbird](#) / [Environment](#) / set(_:value:)

Instance Method

set(_:value:)

Set environment variable

```
mutating func set(  
    _ s: String,  
    value: String?  
)
```

Parameters

s

Environment variable name

value

Environment variable name value

Discussion

This sets the variable within this type and also calls `setenv` so future versions of this type will also have this variable set.
