

[Hummingbird](#) / [URLEncodedFormDecoder](#) / decode(_:from:context:)

Instance Method

decode(_:from:context:)

Extend URLEncodedFormDecoder to decode from Request.

```
func decode<T>(  
    _ type: T.Type,  
    from request: Request,  
    context: some RequestContext  
) async throws -> T where T : Decodable
```

Parameters

type

Type to decode

request

Request to decode from

context

Request context
