

[Hummingbird](#) / [MiddlewareProtocol](#) / `handle(_:context:next:)`

Instance Method

handle(_:context:next:)

```
func handle(
    _ input: Input,
    context: Context,
    next: (Input, Context) async throws -> Output
) async throws -> Output
```

Required Default implementation provided.

Default Implementations

AuthenticatorMiddleware Implementations

```
func handle(Request, context: Context, next: (Request, Context)
async throws -> Response) async throws -> Response
```

Calls `authenticate` and if it returns a valid object login with this object
