

[Hummingbird](#) / [ApplicationProtocol](#) / processesRunBeforeServerStart

Instance Property

processesRunBeforeServerStart

Array of processes run before we kick off the server. These tend to be processes that need other services running but need to be run before the server is setup

```
var processesRunBeforeServerStart: [() async throws -> Void] { get }
```

Required Default implementation provided.

Default Implementations

ApplicationProtocol Implementations

```
var processesRunBeforeServerStart: [() async throws -> Void]
```

Default to no processes being run before the server is setup
