

[Hummingbird](#) / [URLEncodedFormEncoder](#) / encode(_:from:context:)

Instance Method

encode(_:from:context:)

Extend URLEncodedFormEncoder to support generating a Response.

Sets body and header values

```
func encode(  
    _ value: some Encodable,  
    from request: Request,  
    context: some RequestContext  
) throws -> Response
```

Parameters

value

Value to encode

request

Request used to generate response

context

Request context
