

[WSCore](#) / [WebSocketExtensionFactory](#) / nonNegotiatedExtension(_)

Type Method

nonNegotiatedExtension(_:)

Extension to be applied without negotiation with the other side.

```
static func nonNegotiatedExtension(_ build: @escaping () -> some WebSocket  
Extension) -> WebSocketExtensionFactory
```

Parameters

build

Closure creating extension

Return Value

WebSocketExtensionFactory

Discussion

Most extensions involve some form of negotiation between the client and the server to decide on whether they should be applied and with what parameters. This extension builder is for the situation where no negotiation is needed or that negotiation has already occurred.
