

[Hummingbird](#) / [ApplicationConfiguration](#) / with(address:serverName:backlog:reuseAddress:)

## Instance Method

# with(address:serverName:backlog:reuseAddress:)

Create new configuration struct with updated values

```
func with(  
    address: BindAddress? = nil,  
    serverName: String? = nil,  
    backlog: Int? = nil,  
    reuseAddress: Bool? = nil  
) -> ApplicationConfiguration
```
