

[WSCore](#) / [WebSocketInboundStream](#) / [WebSocketInboundStream.AsyncIterator](#) / `nextMessage(maxSize:)`

Instance Method

# nextMessage(maxSize:)

Return next WebSocket message, while dealing with any other frames

```
mutating func nextMessage(maxSize: Int) async throws -> WebSocketMessage?
```

## Discussion

A WebSocket message can be fragmented across multiple WebSocket frames. This function collates fragmented frames until it has a full message
