

[HummingbirdWeb...](#) / [HTTP1WebSocketUpgradeChannel](#) / [init\(responder:configuration:additionalChannelHandlers:shouldUpgrade:\)](#)

## Initializer

# init(responder:configuration:additionalChannelHandlers:shouldUpgrade:)

Initialize HTTP1AndWebSocketChannel with synchronous should Upgrade function

```
init(  
    responder: @escaping HTTPChannelHandler.Responder,  
    configuration: WebSocketServerConfiguration,  
    additionalChannelHandlers: @escaping () -> [any RemovableChannel  
Handler] = { [] },  
    shouldUpgrade: @escaping (HTTPRequest, Channel, Logger) throws -> Should  
UpgradeResult<WebSocketDataHandler<Context>>  
)
```

## Discussion

- responder: HTTP responder
- configuration: WebSocket configuration
- additionalChannelHandlers: Additional channel handlers to add
- shouldUpgrade: Function returning whether upgrade should be allowed
