⊟⊡ **Documentation**

Language: Swift

HummingbirdWeb… / WebSocketServerConfigurat/oimit(maxFrameSize:extensions:autoPing:closeTimeout:validate

Initializer

init(maxFrameSize:extensions:auto Ping:closeTimeout:validateUTF8:)

Initialize WebSocketClient configuration

```swift
init(
    maxFrameSize: Int = (1 << 14),
    extensions: [WebSocketExtensionFactory] = [],
    autoPing: AutoPingSetup = .enabled(timePeriod: .seconds(30)),
    closeTimeout: Duration = .seconds(15),
    validateUTF8: Bool = false
)
```

Discussion

- Paramters

  - maxFrameSize: Max websocket frame size that can be sent/received

  - additionalHeaders: Additional headers to be sent with the initial HTTP request

  - autoPing: Whether we should enable an automatic ping at a fixed period

  - validateUTF8: Should we check text messages are valid UTF8
