⊟□ **Documentation**   Language: Swift

Hummingbird / ResponseEncodable

Protocol

ResponseEncodable

Protocol for encodable object that can generate a response. The router will encode the response using the encoder stored in `Application` `.encoder`.

```
protocol ResponseEncodable : ResponseGenerator, Encodable
```

Relationships

Inherits From

`ResponseGenerator`, `Swift.Encodable`

Inherited By

`ResponseCodable`

See Also

Encoding/Decoding

`protocol RequestDecoder`

protocol for decoder deserializing from a Request body

protocol ResponseEncoder

protocol for encoders generating a Response

protocol ResponseGenerator

Object that can generate a `Response`.

protocol ResponseCodable

Protocol for codable object that can generate a response

struct URLEncodedFormDecoder

The wrapper struct for decoding URL encoded form data to Codable classes

struct URLEncodedFormEncoder

The wrapper struct for encoding Codable classes to URL encoded form data
