▣ **Documentation**                              Language: Swift

---

/ CacheControl

Structure

# CacheControl

Associates cache control values with filename

```
struct CacheControl
```

---

# Topics

## Structures

struct CacheControlValue

    Cache control directive

## Initializers

init([(MediaType, [CacheControlValue])])

    Initialize cache control

init([(MediaType, [Value])])

    Initialize cache control

## Instance Methods

func getCacheControlHeader(for: String) -> String?

Get the Cache-Control header for a file

# Relationships

## Conforms To

`Swift.Sendable`

# See Also

## Request/Response

`struct` `Request`

Holds all the values required to process a request

`typealias` `Parameters`

Parameters is a special case of FlatDictionary where both the key and value types are Substrings. It is used for parameters extracted from URIs

`struct` `MediaType`

Define media type of file

`struct` `Response`

Holds all the required to generate a HTTP Response

`protocol` `ResponseBodyWriter`

HTTP Response Body part writer

`struct` `EditedResponse`

`struct` `Cookie`

Structure holding a single cookie

struct Cookies

Structure holding an array of cookies

struct Cookies

Structure holding an array of cookies
