▣ **Documentation**   Language: Swift

Hummingbird / URLEncodedFormEncoder / URLEncodedFormEncoder.DateEncodingStrategy

Enumeration

URLEncodedFormEncoder.Date EncodingStrategy

The strategy to use for encoding `Date` values.

```
enum DateEncodingStrategy
```

Topics

Enumeration Cases

case `custom((Date, Encoder) throws -> Void)`

   Encode the `Date` as a custom value encoded by the given closure.

case `deferredToDate`

   Defer to `Date` for encoding. This is the default strategy.

case `formatted(DateFormatter)`

   Encode the `Date` as a string parsed by the given formatter.

case `iso8601`

   Encode the `Date` as an ISO-8601-formatted string (in RFC 3339 format).

case `millisecondsSince1970`

   Encode the `Date` as UNIX millisecond timestamp from a JSON number.

```
case secondsSince1970
```

 Encode the `Date` as a UNIX timestamp from a JSON number.
